No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                      Score

Modification of the present peptide for the process of the present peptide, compared with 0.43 +/- 0.06 um and 6.0 +/- 0.9 um, respectively, for the corresponding will type peptide. The claimed smac-derived peptides can be used to identify candidate substances which induce or promote apoptosis in cells. The assay involves determination of the ability of candidate and an IAP of the binding interaction between a smac peptide and an IAP of the peptide an

fluorescence polarisation-based competition assay designed to determine the binding affinity of variant smac peptides (see ABB76206-27) to the Bir-3 and Bir-2 domains of XIAP, an inhibitor of apoptosis protein (IAP) family member. Claimed smac-derived peptides can be used to identify candidate substances which induce or promote apoptosis in cells. The assay involves determination of the ability of candidate compounds to disrupt the binding interaction between a smac peptide and an IAP family member.
                                                                                                                                                                                                                                                                                                                                                             inhibitor of apoptosis; IAP; cancer; vascular disease; hepati autoimmune disease; neurodegenerative disease; tissue damage; muscular tissue damage; heart attack; hepatic tissue damage;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The present sequence corresponds to amino acids 1-9 of human second mitochondria derived activator of caspase (smac), also known as direct inhibitor of depotosis binding protein with low pI (DIABLO), but is fluorosceinated. The peptide was used in a

                                                                                                                                                                                                                                                                                                                                09-AUG-2002
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           to restore normal activity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful in reating disorders involving aberrant protein expression or biological activity. The polypeptide and polypucleotide sequences have applications in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and amino acid sequences. ABG00010-ABG30377 represent novel human diagnostic amino acid sequences of the invention.

Note: The sequence data for this patent did not appear in the printed specification, but was obtained in electronic format directly from WIPO

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polymucleotides are also used in diagnostics as expressed sequence tags polymucleotides are also used in diagnostics, as expressed sequence tags

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         method involves detecting the presence of large and small caspase subunits after contacting cell transformed with the vector expressing (I), with the candidate compound. A decrease in processing indicates the presence of an inhibitor and an increase in the processing indicates the presence of an enhancer. Preferably, the large and small subunits of caspase-3, caspase-3 or caspase-9 are detected. (I) is also useful for identifying a compound that inhibits Smac binding to Smac-binding or a full-length IAP). (II) is useful in gene therapy techniques. The present sequence represents the N-terminal amino acid sequence of Smac
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    death pathway; and (c) measuring the specific apoptotic activity of the cell populations, where inhibition of the specific apoptotic activity is indicative that the compound is an inhibitor of apoptosis. (I) and (II) are useful for inducing apoptosis in a cell. The Smac polypeptide and polynucleotide are useful for stimulating apoptosis in a neoplastic or tumour cell which overexpresses an inhibitor of caspase, where the inhibitor inhibits activation or activity of caspase-3, caspase-7 or caspase-9. Preferably, the cell overexpresses at least a portion of IAP. (I) is useful for identifying an inhibitor or enhancer of a caspase-mediated apoptosis which involves contacting a cell transformed or transfected with a vector expressing (I) with a candidate inhibitor or candidate enhancer; and detecting cell viability, where an increase in cell viability indicates the presence of an inhibitor and a decrease in cell viability indicates the presence of an enhancer. Optionally, the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The invention relates to an isolated Smac peptide or polypeptide (I) and an isolated nucleic acid (II) encoding (I). Also described is a method of identifying a compound that inhibits apoptosis, comprising:
(a) separately contacting several cell populations expressing a cytosolic Smac (a Smac isoform that begins with MKSDFYF sequence, replacing the mitochondrial targeting sequence (residues 1-55 of (I)), and an residues 56.00 of (I)) and an inhibitor of BID (Boll) interacting domain) with a compound to be tested for apoptotic inhibiting activity, (b) incubating the cell populations with a direct stimulus of the cell

with an IAP and detecting the presence of an IAP/DIABLO complex), modulating the death of a cell (by contacting a cell with an agent, which modulates the level and/or functional activity of a polypeptide), a composition for treatment/prophylaxis of a DIABLO relate condition comprising an agent which reduces the level/activity of a polypeptide or DIABLO. DIABLO, or a nucleic acid encoding DIABLO, is useful for screening for an agent which modulates cell death. An antigen-binding molecule is useful for detecting DIABLO in a biological sample. The agent which modulates the level and/or functional activity cappitide comprising mature or pro-human DIABLO polypeptide, is useful for the treatment and/or prophylaxis of a condition associated with expression or activation of DIABLO, such as cancer, vascular disease, hepatic disease, autoimmune disease and neurodegenerative
                                                                                                                                                                                                                                                                                                                                                                                                                                                                designated DIABLO, or its biologically active fragment of 8 amino aci in length. Also included are the polyucclectide encoding DIABLO, expression vectors, transformed host cells, producing a biologically active fragment of DIABLO (by contacting an inhibitor of apoptosis (I with a fragment of the polypeptide, and detecting a reduction in acti of the IAP), producing a natural or synthetic variant of DIABLO with cell death activity or which reduces IAP activity, an antigenbinding molecule that specifically binds to DIABLO or its fragment, detecting DIABLO in a biological sample (by contacting the sample detecting DIABLO) in a biological sample (by contacting the sample)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 New pro-apoptotic polypeptide, useful for screening for agents which modulate cell death and for treating conditions associated with cell death or apoptosis \mathbf{e}_i g . cancer \, -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             US2002110851-A1
                                                                                          attack, or hepatic tissue damage associated with a liver disease DIABLO is also useful for treatment and/or prophylaxis of conditions
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The invention relates to an isolated pro-apoptotic polypeptide, designated DIABLO, or its biologically active fragment of 8 amino acids
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 02-MAR-2000; 2000AU-0005995

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                         Match L

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      δÃ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The invention relates to an isolated Smac peptide or polypeptide (I) cand an isolated nucleic acid (II) encoding (I). Also described is a CC method of identifying a compound that inhibits apoptosis, comprising: (a) separately contacting several cell populations expressing a CC cytosolic Smac (a Smac isoform that begins with MKSDFYF sequence, CC replacing the mitochondrial targeting sequence (residues 1-55 of (I)), CC and residues 56-60 of (I)) and an inhibitor of BID (Bcl2 interacting CC domain) with a compound to be tested for apoptotic inhibiting activity; (b) incubating the cell populations with a direct stimulus of the cell cell populations, where inhibition of the specific apoptotic activity is cell populations, where inhibition of the specific apoptotic activity is cell populations, where inhibition of the specific apoptotic activity is cell populations, where inhibition of the specific apoptotic activity is cell population, where inhibition of the specific apoptotic activity is cell population, where inhibitor of apoptosis, (I) and (II) cell population of inhibitor of apoptosis, (I) and (II) cell population or activity of caspase-3, caspase-7 or ceapase-9. Perferably the cell overexpresses at least a portion of IAP. (I) is useful for identifying an inhibitor or enhancer of a caspase-7 cell transformed or transferted with a vector expressing (I) with a candidate inhibitor or call viability indicates the presence of an inhibitor and a decrease in cell viability indicates the presence of an inhibitor and a decrease in cell viability indicates the presence of an enhancer. Optionally, the cell presence of an enhancer optionally, the cell presence of an inhibitor or expressing indicates the presence of an inhibitor and a decrease in cell viability indicates the presence of an inhibitor or expressing indicates the presence of an enhancer. Optionally, the cell presence of an enhancer optionally, the cell presence of an inhibitor of and indicates the presence of an enhancer. Optionally, the cell presence of an en
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               uM, respectively, for the present peptide, compared with 0.42 +/-
0.02 uM and 2.3 +/- 0.3 uM, respectively, for full-length smac.
Modification of the N-terminal alanine destroys binding affinity to
XTAP. For example, N-terminal alanine with glycine, propionic acid
or isobityric acid all resulted in Kd values for Bir-3 and for Bir-2
of over 1,000 uM. The claimed peptides can be used to identify
candidate substances which induce or promote apoptosis in cells.
The assay involves determination of the ability of candidate
compounds to disrupt the binding interaction between a smac (DIABLO)
                                                                                                                                                                               Omi; HtrA2; serine protease; inhibitor of apoptosis protein; IAP; caspase; apoptosis; cytostatic; immunosuppressive; neuroprotective;
                                                                                                                                                                                                                                                                                                         ABP71314 standard; peptide;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The present sequence is a peptide derived from wild-type human second mitochondria derived activator of caspase (smac), also known as direct inhibitor of apoptosis binding protein with low pI (DIABLO). The peptide is one of 12 claimed smac (DIABLO)-derived peptides (see ABB/6208-19) which bind to the Bir2 and Bir3 domain of XIAP, an inhibitor of apoptosis protein (IAP) family member. K values for Bir-3 and Bir-2 are 0.69 +/- 0.05 uM and 6.7 +/- 0.7

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The invention relates to polynucleotides encoding an Omi (Serine protease) peptide or polypeptide. The Omi peptide specifically binds to portion of an Inhibitor of Apoptosis Protein (IAP). The Omi polypeptide induces caspase-independent apoptosis, or fails to have serine protease activity. The Omi peptides are useful for regulating or altering apoptosis, specifically caspase-mediated apoptosis, and as immunogens for raising antibodies. Enhancers of apoptosis are useful for treating cancers, tumours or for destroying cells that mediate autoimmune diseases. Compositions may also be used for the treatment of diseases associated with inappropriate activation of apoptosis such as neurodegenerative diseases and ischaemic injury. The antibodies can be
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Homo
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Human; pro-apoptotic protein; DIABLO; cell death; apoptosis; inhibitor of apoptosis; IAP; cancer; vascular disease; hepatic disease; autoimmune disease; neurodegenerative disease; tissue damage; muscular tissue damage; heart attack; hepatic tissue damage;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 neurodegenerative diseases and ischaemic injury. The antibodies can be used in isolating Omi peptides, polypeptides and their variants, in identifying molecules that interact with Omi peptides and polypeptides, and in inhibiting or enhancing the biological activity of Omi peptides and polypeptides. Sequences ABF71310-315 represent fragments of various the biological activity of the peptides.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Human
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  New Omi nucleic acids and peptides that bind to an inhibitor of apoptosis proteins, useful for regulating or altering caspase-me apoptosis and for treating cancer, tumor, or autoimmune diseases
                                                                                                                                                   02-MAR-2001; 2001US-0798116
                                                                                                                                                                                                                                                                                US2002110851-A1

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           CC with an IAP and detecting the presence of an IAP/DIABLO complex),

CC modulating the death of a cell (by contacting a cell with an

CC agent, which modulates the level and/or functional activity of a

CC polypeptide, a composition for treatment/prophylaxis of a DIABLO related

CC polypeptide or DIABLO. DIABLO, or a nucleic acid encoding DIABLO, is

CC useful for screening for an agent which modulates cell death. An

CC antigen-binding molecule is useful for detecting DIABLO in a biological

CC sample. The agent which modulates the level and/or functional activity of

CC a polypeptide comprising mature or pro-human DIABLO polypeptide, is

CC useful for the treatment and/or prophylaxis of a condition associated

CC useful for the treatment and/or prophylaxis of a condition associated

CC with expression or activation of DIABLO, such as cancer, vascular

CC disease, hepatic disease, autoimmune disease and neurodegenerative

CC disease, tissue damage or muscular tissue damage associated with heart

CC attack, or hepatic tissue damage associated and aliver disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Query Match

Also included are the polynuclectide encoding DIABLO.

CC expression vectors, transformed host cells, producing a biologically

CC expression vectors, transformed host cells, producing a biologically

CC with a fragment of DIABLO (by contacting an inhibitor of apoptosis (IAP)

CC with a fragment of the polypeptide, and detecting a reduction in activity

CC with cell death activity or which reduces IAP activity, an antigen-

CC binding molecule that specifically binds to DIABLO or its fragment,

CC detecting DIABLO in a biological sample (by contacting the sample

CC with an IAP and detecting the presence of an IAP/DIABLO complex),

CC modulating the death of a cell (by contacting a cell with an

CC agent, which modulates the level and/or functional activity of a

CC polypeptide), a composition for treatment/prophylaxis of a DIABLO is

CC condition comprising an agent which reduces the level/activity of a

CC polypeptide or DIABLO. DIABLO, or a nucleic acid encoding DIABLO, is

CC useful for screening for an agent which modulates cell death. An

CC useful for screening for an agent which modulates cell death. An

CC apolypeptide comprising mature or pro-human DIABLO in a biological

CC sample. The agent which modulates the level and/or functional activity of

CC useful for the treatment and/or prophylaxis of a condition associated

CC with expression or activation of DIABLO, such as cancer, vascular

CC disease, hepatic disease, autoimmune disease and neurodegenerative

CC attack. or hematic fissue damage associated with heart
                                                                                                                                                                                                                                                                                                                                                                                                                               Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       attack, or hepatic tissue damage associated with a liver disease. DIABLO is also useful for treatment and/or prophylaxis of conditions associated with cell death or apoptosis. The present sequence represents a partial peptide sequence from human DIABLO, identified by protein sequencing of a protein (later identified as DIABLO) which co-precipitates with the human IAP protein MIHA (not defined).

                                                                                                                                                                                                                                                                                                                                                                                                                                        second mitochondria derived activator of caspase (smac), also known as direct inhibitor of apoptosis binding protein with low pI (DIABLO). The peptide is one of 12 claimed smac (DIABLO) the peptide is one of 12 claimed smac (DIABLO) the pi claimed smac (DIABLO). The peptide is one of 12 claimed smac (DIABLO) derived peptides (see ABP56208-19) which bind to the Bir2 and Bir3 domain of XIAP, an inhibitor of apoptosis protein (IAP) family member. Repetides for Bir-3 and Bir-2 are 0.43 +/- 0.6 uM and 6.0 +/- 0.9 uM, respectively, for the present peptide, compared with 0.42 +/- 0.0 uM and 2.3 +/- 0.3 uM, respectively, for full-length smac. Modification of the N-terminal alanine destroys binding affinity to XIAP, and mutation of the valine, proline or isoleucine also causes some loss of binding. Amino acids C-terminal to the isoleucine are not important for binding. The claimed peptides can be used to identify candidate substances which induce or promote apoptosis in cells. The assay involves determination of the ability of candidate compounds to disrupt the binding interaction between a smac (DIABLO) peptide and an IAP family member.
                                                                                                                                                                                                                                                                                                                                                                            Matches

Claimed smac-derived peptides (see ABB76208-19) bind to the Bir2 and Bir3 domain of XIAP, an inhibitor of apoptosis protein (IAP) family member. Modification of the N-terminal alanine destroys all binding affinity for the protein. Thus, Kd values for Bir-3 and Bir-2 were each over 1,000 uM for the present peptide, compared with 0.43 +/ 0.06 uM and 6.0 +/ 0.9 uM, respectively, for the corresponding wild-type peptide. The claimed smac-derived peptides can be used to identify candidate substances which induce or promote apoptosis in cells. The assay involves determination of the ability of candidate compounds to disrupt the binding interaction between a smac peptide and an IAP
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            mitochondria derived activator of caspase (smac), also known direct inhibitor of apoptosis binding protein with low pI (DIABLO), but with the native N-terminal alanine residue (see
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Novel peptide derived from wild-type activator of caspase protein useful f substances to kill cancerous cells -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The present sequence is a peptide derived from human second mitochondria derived activator of caspase (smac), also known

fluorescence polarisation-based competition assay designed to determine the binding affinity of variant smac peptides (see ABB76206-27) to the Bir-3 and Bir-2 domains of XIAP, an inhibitor of apoptosis protein (IAP) family member. Claimed smac-derived peptides can be used to identify candidate substances which induce or promote apoptosis in cells. The assay involves determination of the ability of candidate compounds to disrupt the binding interaction between a smac peptide and an IAP family member.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     polypeptide or DIABLO. DIABLO, or a nucleic acid encoding DIABLO, is useful for screening for an agent which modulates cell death. An antigen-binding molecule is useful for detecting DIABLO in a biological sample. The agent which modulates the level and/or functional activity of a polypeptide comprising mature or pro-human DIABLO polypeptide, is useful for the treatment and/or prophylaxis of a condition associated with expression or activation of DIABLO, such as cancer, vascular disease, hepatic disease, autoimmune disease and neurodegenerative disease, tissue damage or muscular tissue damage associated with heart attack, or hepatic tissue damage associated with a liver disease.

(II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating disorders involving aberrant protein expression or biological activity. The polypeptide and polynucleotide sequences have applications in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and amino acid sequences. ABG00010-ABG30377 represent novel human diagnostic amino acid sequences of the invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ABB76218;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ABB76218
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                polynucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy technique to restore normal activity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food employed.
                                                                                                                                                                                                                                                                                                                                                                                                                 human; cancer;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Note: The sequence data for this patent did not appear in the printed specification, but was obtained in electronic format directly from WIPO
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ş
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                second mitochondria derived activator of caspase (smac), also known cas direct inhibitor of apoptosis binding protein with low pi (DIABLO). The peptide is one of 12 claimed smac (DIABLO)-derived peptides (see ABB76208-19) which bind to the Bir2 and Bir3 domain of XIAP, an inhibitor of apoptosis protein (IAP) family member. CK (values for Bir-3 and Bir-2 are 0.5 +/- 0.1 uM and 2.5 +/- 0.0 c uM, respectively, for the present peptide, compared with 0.42 +/- 0.02 uM and 2.3 +/- 0.3 uM, respectively, for full-length smac.

Amino acids C-terminal to the isoleucine of smac (DIABLO) are not important for binding to XIAP. The claimed peptides can be used to identify candidate substances which induce or promote apoptosis in cells. The assay involves determination of the ability of candidate compounds to disrupt the binding interaction between a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Query Match

Claimed smac-derived peptides (see ABB76208-19) bind to the Bir2 and Bir3 domain of XIAP, an inhibitor of apoptosis protein (IAP) family member. Modification of the N-terminal alanine destroys all binding affinity for the protein. Thus, Kd values for main and Bir-2 were each over 1,000 uM for the present peptide, compared with 0.43 +/- 0.06 uM and 6.0 +/- 0.9 uM, respectively, for the corresponding N-terminal Ala peptide. The claimed smac-derived peptides can be used to identify confident apportunity of the corresponding N-terminal Ala

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       (DIABLO), but has the native valine residue (see ABB76209) replaced by alanine. Claimed smac-derived peptides (see ABB76208-19) bind to the Bir2 and Bir3 domain of XIAP, an inhibitor of apoptosis protein (IAP) family member. Mutation of the valine of the peptide causes some loss of binding to the protein. Thus, Kd values for Bir-3 and Bir-2 were 12 +/- 2 uM and 56 +/- 5 uM, respectively, uM for the present peptide, compared with 0.43 +/- 0.06 uM and 6.0 +/- 0.9 uM, respectively, for the corresponding wild-type peptide. The claimed smac-derived peptides can be used to identify candidate substances which induce or promote apoptosis in cells. The assay involves determination of the ability of candidate compounds to

RESULT 15
ABB76226
    CC The present sequence is a peptide derived from human second CC mitochondria derived activator of caspase (smac), also known as CC direct inhibitor of apoptosis binding protein with low pI CC (DIABLO), but has the native Ala residue (see ABB76209) replaced CC by glycine. Claimed smac-derived pertides (see ABB76208-19) bind CC to the Bir2 and Bir3 domain of XIAP, an inhibitor of apoptosis CC protein (IAP) family member. Mutation of the amino acids CC claimed stream of binding to the protein. Thus, Kd values for CC claimed little loss of binding to the protein. Thus, Kd values for CC claimed bir-2 were 1.2 +/- 0.4 uM and 10 +/- 2 uM, respectively, CC uM for the present peptide, compared with 0.43 +/- 0.06 uM and 6.0 the claimed smac-derived peptides can be used to identify candidate substances which induce or promote apoptosis in cells. The assay C involves determination of the ability of candidate of amily member.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Ъ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Š

                                                                                                                                                                                                                                                                                                                    The present sequence is a peptide derived from human second control mitochondria derived activator of caspase (smac), also known as condition of depotes in with low pI (DIABLO), but has the native N-terminal alanine residue (see ABB76209) replaced by propionic acid. Claimed smac-derived peptides (see ABB76209) replaced by propionic acid. Claimed smac-derived peptides (see ABB76209) replaced by propionic acid. Claimed smac-derived peptides (see ABB76208-19) bind to the Bir2 and Bir3 domain of XIAP, an ocid inhibitor of apoptosis protein (IAP) family member. Modification of the N-terminal alanine destroys all binding affinity for the protein. Thus, Kd values for Bir-3 and Bir-2 were each over 1,000 cum for the present peptide, compared with 0.43 +/- 0.06 uM and 6.0 +/- 0.9 uM, respectively, for the corresponding N-terminal Ala peptide. The claimed smac-derived peptides can be used to identify candidate substances which induce or promote apoptosis in cells. The assay involves determination of the ability of candidate compounds to disrupt the binding interaction between a smac compensation of the ability of candidate peptide and an IAP family member.
